Empower the Passion

ABOUT SIKE

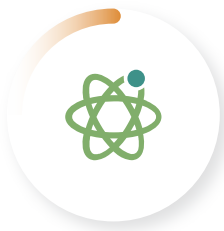

Sike Fishing Tackle is a modern enterprise integrating R&D, manufacturing, and sales, specializing in high-quality fishing hooks with a core focus on lure hooks. We offer a complete range of professional hooks for diverse angling techniques. Supported by scaled production and stringent quality control, we deliver products that excel in both performance and market competitiveness.

Driven by our mission — “Innovate for Every Cast” — we aim to set the benchmark in China’s hook manufacturing sector. While expanding globally, we are dedicated to advancing sustainable fishing culture and providing anglers worldwide with precise, reliable gear.

MISSION

Innovate for Every Cast.

VISION

Conquer Every Journey, With You.

Core Values

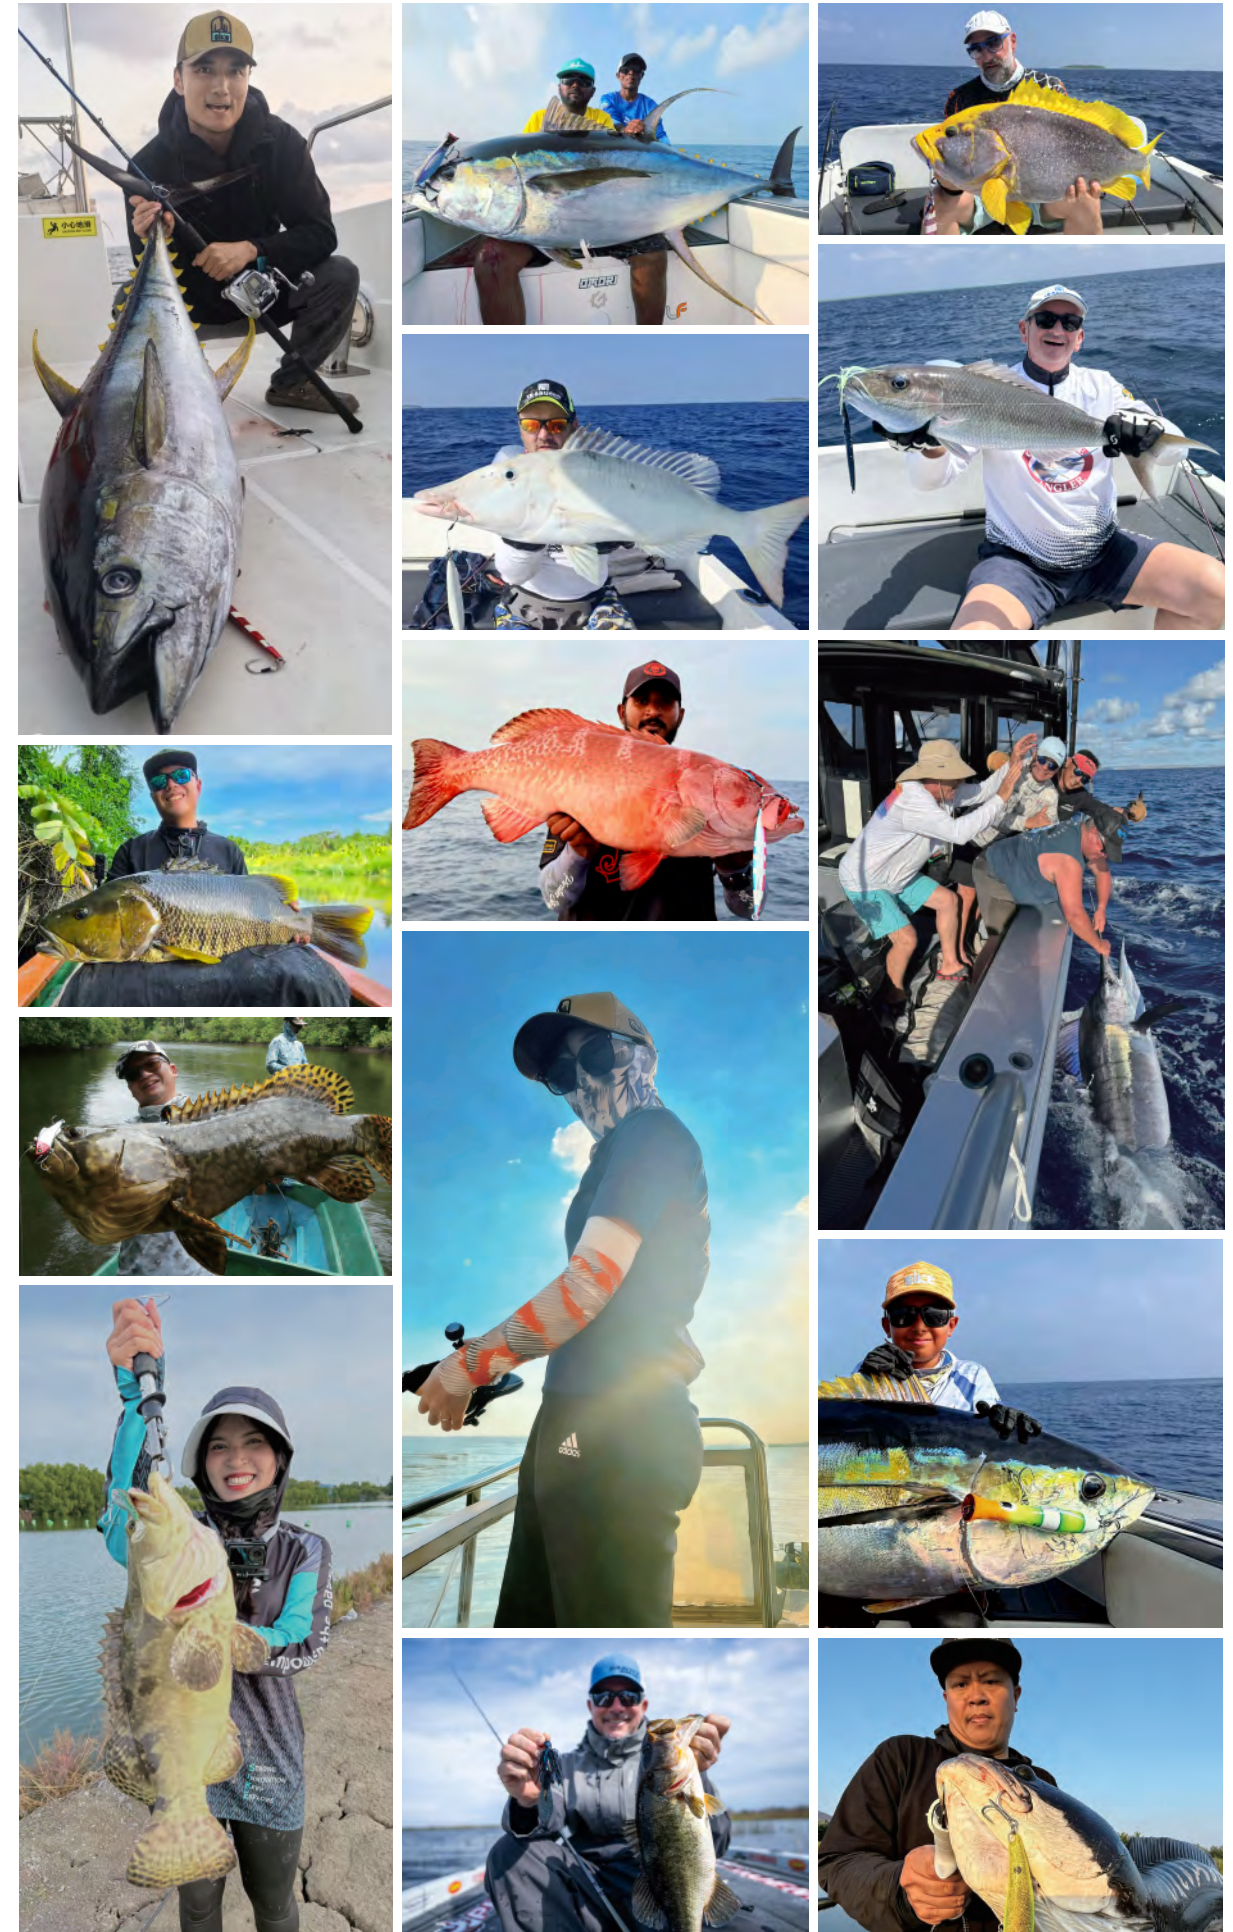

Strong Innovation Keep Explore

One World, One Sike

A silver hook slices through dawn and dusk.
You in the far - north, me in the southernmost sea.
Yet we are both of Sike.

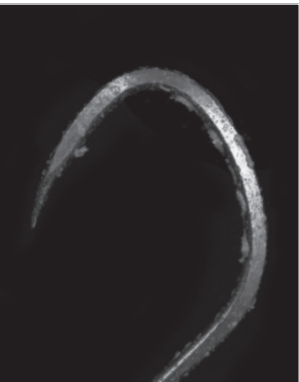

Hook Coating

Super-Slide Coating

This premium coating is formulated with internationally sourced materials and meets all global safety standards, verified by SGS testing. Engineered as a seamless “second skin” for the hook, it reduces the friction coefficient to a consistent 0.05–0.15. This not only minimizes water resistance for smoother presentation but, most critically, allows the point to penetrate instantly upon contact—dramatically improving hook-set efficiency.

Ultra Anti-Rust Coating

With corrosion resistance over three times greater than standard plating, this advanced electroplating excels in saltwater environments. Its distinctive matte-gray finish provides both a refined look and lasting protection. The hooks retain sharpness and structural integrity far longer, reducing the need for frequent replacement. Ideal for all water types, they offer particular advantage in marine fishing.

Note:
Store separately from lead items to preserve the anti-rust coating.

Hook Point Technology

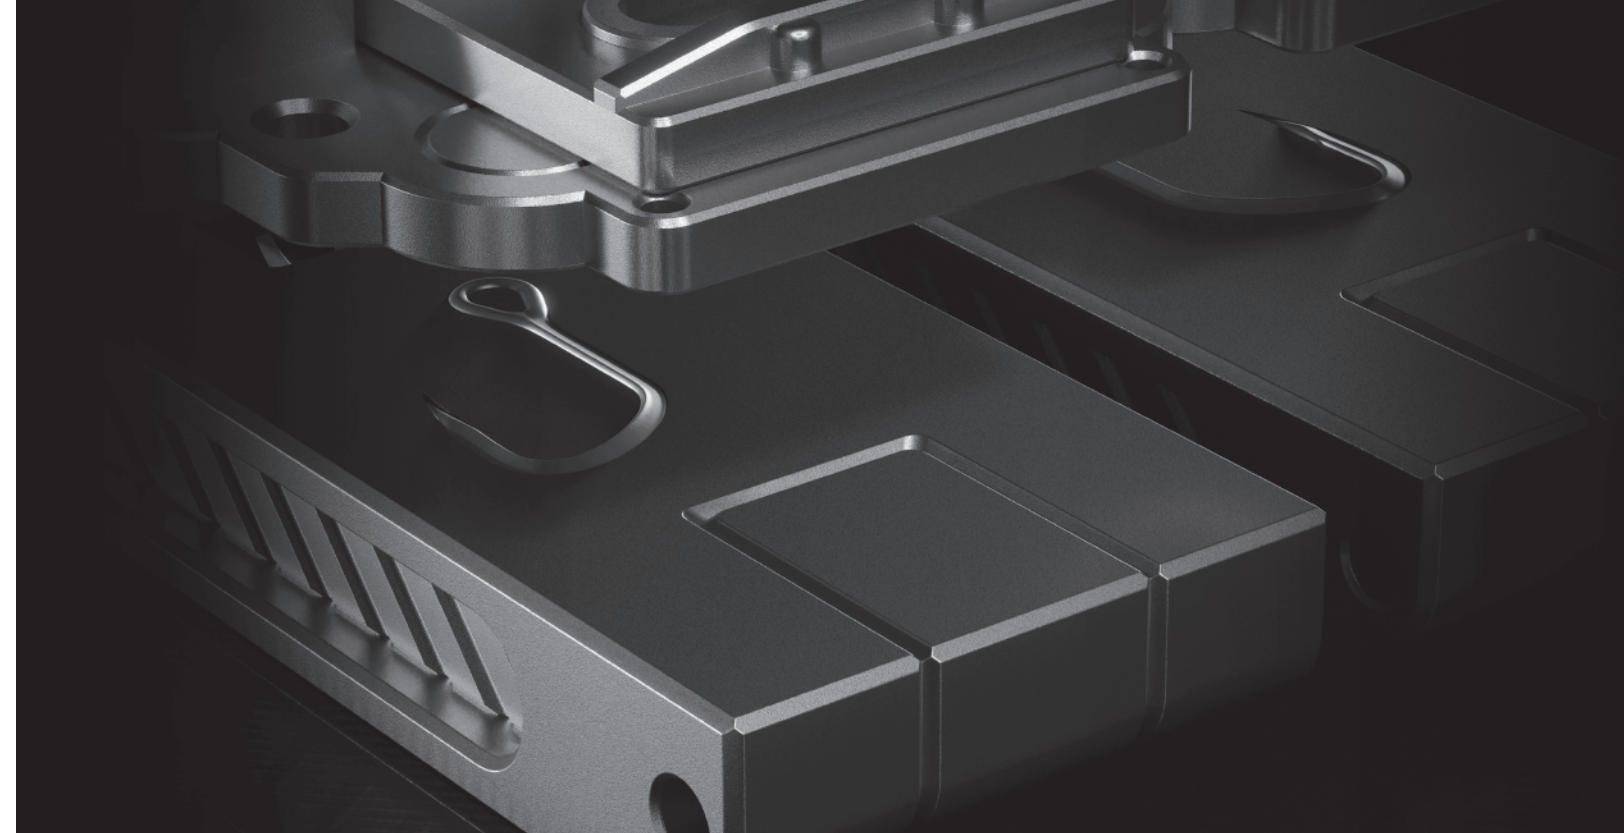

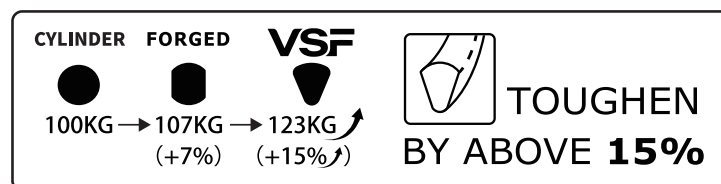

SIKE Presents: VSF Technology *The Ultimate Power Plant for Your Hookset*

Forged from a single goal—real-world performance—through advanced materials science and precision mechanics, SIKE's VSF Technology introduces the Power Plant of the hookset. It solves a critical problem: energy dispersion. At the moment of truth, it focuses scattered force into a single, decisive point—driving the hook deep and holding trophy fish secure.

Driven by a single mission — to solve anglers' core challenges — SIKE pushed the limits of hook strength and explosive power. The quest launched on July 23, 2021. Through two and a half years of dedicated R&D and 27 relentless rounds of testing and refinement, the breakthrough was achieved in late 2023. VSF Technology directly tackles the old enemies of weak penetration and scattered force, redefining what a hook can do.

The secret lies in its force-concentration mechanics. The triangular structure acts as an energy-focusing anchor, directing all potential energy to the hook point upon impact. Precision cold-forging shapes the hook into a resilient triangular profile, achieving superior torsion resistance while focusing the pull. The exact forge angle — the result of countless simulations — is the golden key. It balances concentrated energy with unwavering stability. Stray from it by a hair, and power scatters. This is engineering where millimeters make the champion.

The introduction of VSF Technology marks a leap in manufacturing and redefines the hookset experience—built to conquer large fish with explosive penetration, offering complete control with every strike.

PEAK CONCENTRATION | The Decisive Punch

The innovation begins with the V-forging process—a method that boosts density and core strength by over 15% and transforms scattered energy into a single point of impact. This concentrated power unleashes upon penetration, forging an unyielding foundation that holds firm even under the most violent struggle.

UNSHAKABLE CONTROL | The Lock That Holds

The control is engineered into the geometry—the inner micro-arc surface integrates with the V-sides to form a continuous load-bearing loop. This design expands the contact area, distributes force evenly, and prevents stress overload, consistently delivering a secure, first-strike lock with reduced resistance and lower tear-out risk.

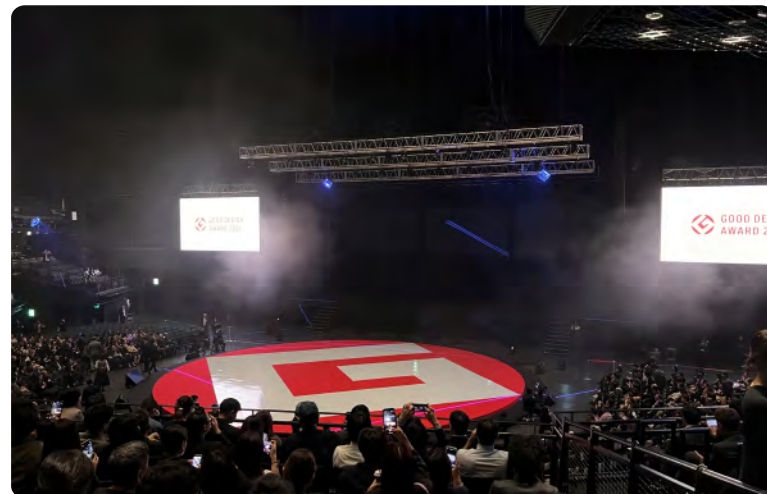

SURGICAL PRECISION | The Guided Strike

The precision is directed by the design—the outer V-profile functions as a guidance system to channel all condensed force to the hook point. This ensures a clean, decisive energy release for maximum retained penetration power, subduing large fish immediately with positive, escape-proof hooksets.

「VSF Technology」 is more than an innovation—it's your decisive advantage. Choose the hook that concentrates force, delivers control, and turns potential into landed fish. At SIKE, we're not just building hooks; we're forging tools of unforgettable encounters. Join us. Redefine your strike.

AWARDS AND HONORS

Japan GOOD DESIGN Award

GOOD DESIGN Award (Japan)

A global design laurel—alongside Germany's iF and Red Dot awards and the U.S. IDEA Award—the GOOD DESIGN Award is Asia's most authoritative design accolade, often hailed as “the Oscar of Eastern Design.” It recognizes not only innovation but impact: products that improve society, reduce waste, and advance culture. Sike's receipt of this award marks world-class validation of its design, showcasing the sophisticated capability of a Chinese fish-hook brand.

CHINA FISH Best Product Award

CHINA FISH is one of the Asia-Pacific region's most influential professional fishing trade exhibitions. Its “Best Product Award” honors gear that leads in innovation, technology, and market potential.

At the 31st and 32nd CHINA FISH (2025–2026), Sike earned the Annual Best Product Award for its engineered hooks—winning the honor for two consecutive years. This industry-authorized recognition of performance and design highlights a distinguished achievement in global tackle.

Intellectual Property & Patents

MGT -New Material

MGT Ultra-High-Speed Steel — Jointly engineered by Sike and Japanese R&D team

MGT Ultra-High-Speed Steel | Developed through exclusive collaboration between Sike and Japanese R&D team, MGT represents the definitive evolution of the HARD23 series—setting a new technical benchmark for high-performance hooks.

Key Technical Advancements:

760HV Hardness — an 80HV increase over standard high-carbon steel (680HV)

Tensile Strength — improved by over 20%

Engineered Toughness — maintains exceptional resilience without compromising ultra-high hardness, overcoming the traditional brittleness trade-off

Performance Redefined:

MGT delivers extreme sharpness retention and extended service life—redefining durability standards for deep-sea big-game fishing and providing a reliable solution for the most demanding marine conditions.

MGT: Outperforms by $\geq 20\%$ in tensile strength under equivalent load conditions

JIGGING HOOK

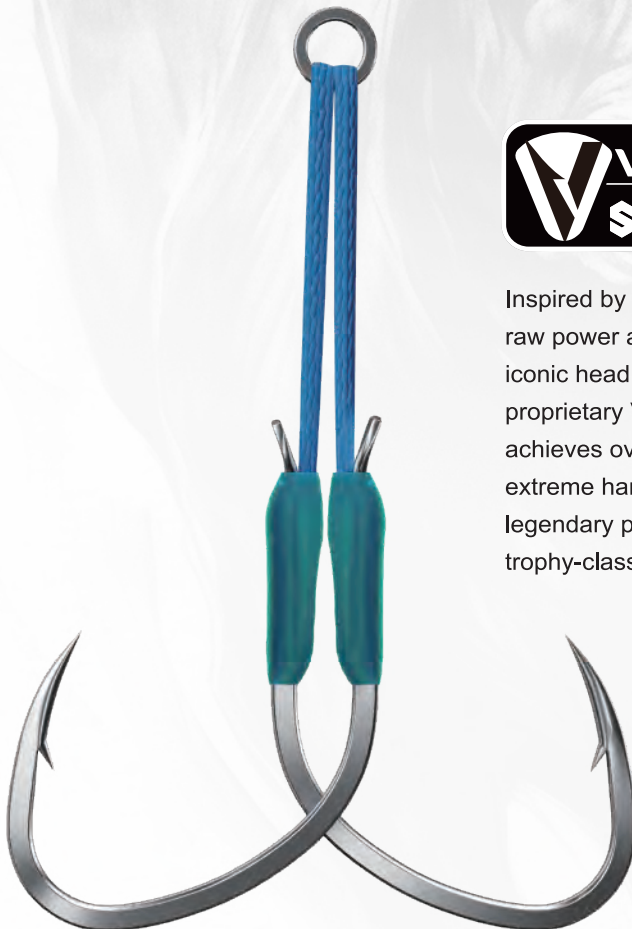

URUZ

Built for Trophy Conquest

Awarded the 2024 GOOD DESIGN AWARD (Japan)

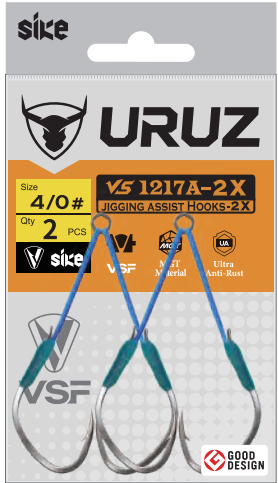

Inspired by the mighty aurochs of prehistoric Europe—a primal symbol of raw power and resilience—URUZ series embodies the ultimate power. Its iconic head emblem concentrates that formidable might. Forged with proprietary VSF Technology and MGT high-performance material, it achieves over 30% higher tensile strength, delivering a synthesis of extreme hardness and structural toughness. Engineered to channel that legendary power, its defining purpose is the reliable conquest of trophy-class giants.

VF3417 Treble Hooks

Reign over the deep with a single strike!

Forged in the spirit of Jie Lin — the primordial leviathan from the *Huainanzi*, the mythic source of all scaled life. It carries the resilience of its scales and the auspicious power of its lineage. More than a tool, it is a benevolent instrument for the modern angler — precise, noble, and worthy of the hunt.

CF3311 TREBLE HOOK

PIAOCI-3° Outward Treble

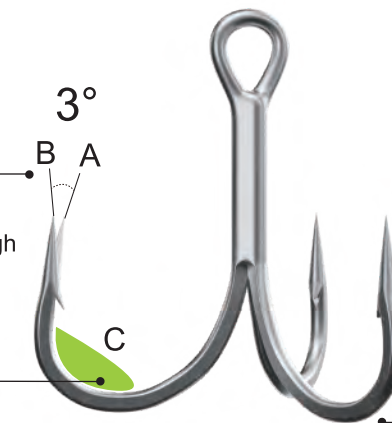

Patented 3° outward point design redefines hook-up efficiency in lure fishing. Converts light, tentative strikes into solid hookups where standard trebles fail — dramatically boosting catch rates.

3° Outward Angle

Precision 3° outward angle (A-B) delivers superior holding power — where standard outward designs fall short. Ensures stable hook-sets on light and glancing bites through precision engineering.

Curved-In Hook Gap

Curved-In Hook Gap (C) works with the barb to create a positive anti-release lock. Once set, the inwardly curved gap holds more jaw tissue—minimizing throw-offs during headshakes.

Ultra Anti-Rust

Maximum saltwater corrosion resistance for extended hook life.

VF3317 Treble Hook

When looking for trophy fish - look no further than Sike's Billfish tournament circle

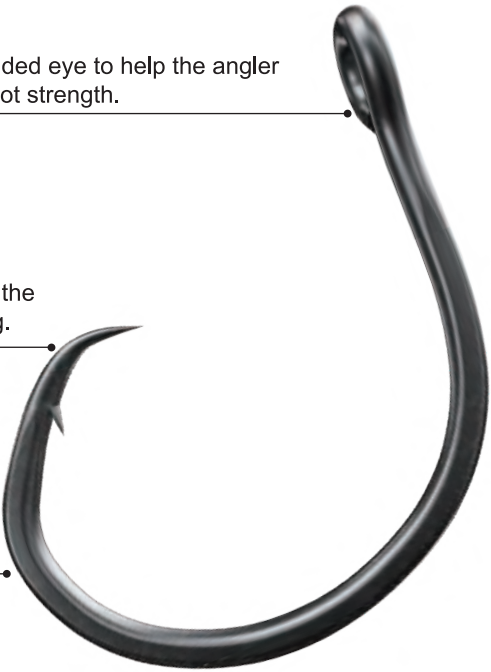

CS2743
Billfish Tournament Circle

Using a welded eye to help the angler increase knot strength.

In-line point for use in all tournaments to increase hooking the fish in the corner of the mouth for catch and release fishing.

Cold forged shank for super strength and with a black nickel coating to entice a bite from the mostcautious fish.

Sike's billfish tournament circle has been crafted with IGFA and gamefisherman in mind.

SIKE OUTDOOR FISHING GLOVES

NEW

- Moisture-Wicking & Quick-Drying
- Non-Slip & Abrasion-Resistant
- Breathable & High-Stretch
- High Sensitivity

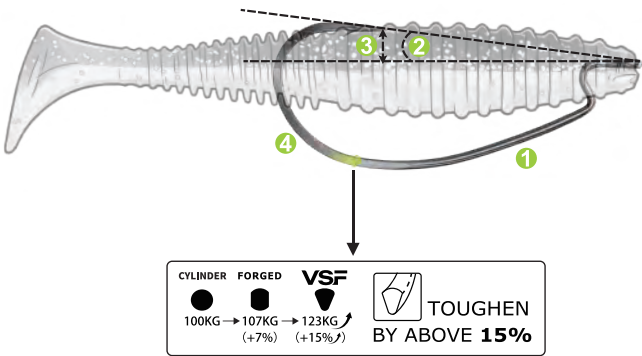

Size: L-XL ☐ XXL ☐ Color: Camo

Custom-printed Lycra fabric. Soft, breathable, and gentle on the skin. The gloves fit snugly for excellent dexterity and unrestricted finger movement. Non-slip silicone dots on the fingers, while the palm features large honeycomb-patterned silicone in key grip zones—with increased density for superior anti-slip performance.

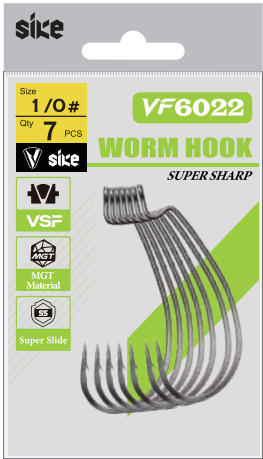

NEW
VF6022

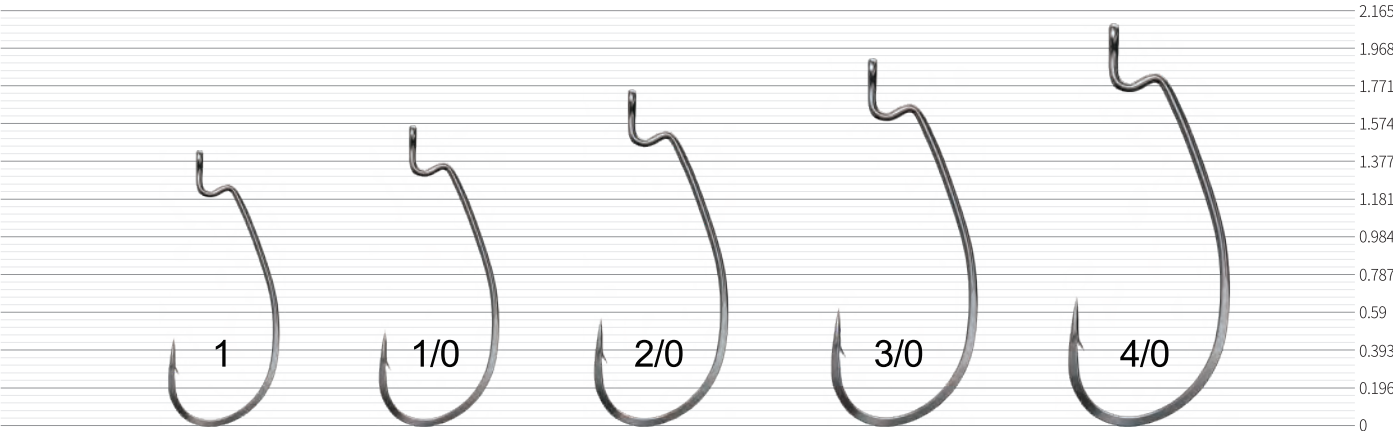

Premium MGT material equipped with VSF core technology increases tensile strength by over 25%, super-slide coating enables instant jaw bone penetration to minimize headshake throw-offs, and rigs weedless with soft baits for aggressive, secure hookups in heavy cover and structure.

- 1 New “MGT” material delivers extreme hardness and sharpness with superior toughness, lasting wear, and corrosion resistance.
- 2 Slightly inward-angled point ensures precise soft bait alignment and noticeably smoother penetration.
- 3 Optimized point-to-shank gap accommodates a wide range of common soft baits.
- 4 Super-slide coating minimizes penetration resistance.
